Resulta has extended considerably their portfolio of consulting during last years, becoming reference in the market, with solutions that reflect a truly multidisciplinary vision. Our organization offers a complete scope of services to help the business leaders to select the best strategy and to improve procedures, technologies, people and risks management, working in a collaborative way with the companies, focusing in real solutions for problems that impact the business.

Gamatecnica - Engineering & Productivity Consulting is built by a team of associated professionals working in Industrial Engineering consulting execution. Founded from the market requirements to offer a new work methodology, oriented to supply technical solutions and capable to optimize cost X benefit relation during services execution, Gamatecnica conduct performance analysis caused by deviation and develop custom work plans and projects for companies in several different sizes and segments.

Applying engineering practices and improved process management, Gamatecnica team hold the necessary knowhow to improve results performance, assuring quality and cost reduction, always allied to accomplish cut-off dates and safety procedures.

FULL SERVICE MODULE

FULL SERVICE

The main proposal of Module for Operational Excellence Full Service, developed by Resulta Corporate Consulting and Gamatecnica – Engineering & Productivity Consulting, is to be a complete solution of corporate management that allies skills in finance, strategic management, industrial engineering, projects engineering and supply chain.

Those competences are applied from conception to implementation of assembly design, expansion or relocation projects, and in costs reduction projects, and operational performance improvement. With those principles we help our clients to transform main areas involved in the value chain, from the relationship management with the client to suppliers of services and products management.

- Projects, technologies and implementation management;
- Business Case and technical / economical feasibility studies;
- Financial & Physical control of CAPEX and support to supply area;
- Documentation, flows, procedures and ergonomics;
- Production engineering;
- Supply Chain - Inbound & Outbound / S&OP;
- Cost reduction projects and productivity improvement;
- Quality assurance projects.
